

Movie Genre Classification – Task 1 Report

Dataset Source:

IMDB Movie Genre Classification Dataset (Kaggle)

Dataset Shape:

Rows: 54,214

Columns: 4

Columns Description:

- id – Unique movie identifier
- title – Movie title
- genre – Target variable (movie genre)
- description – Movie plot summary

Genre Distribution Insight:

The dataset is imbalanced. Drama and Documentary dominate the dataset, while genres such as War and News have very few samples. This imbalance should be considered during model training.

Missing Values:

No missing values were found in any of the dataset columns.

Conclusion:

The dataset is clean, well-structured, and suitable for text-based movie genre classification tasks.
