

Task 2: SMS Spam Detection

Objective

The objective of this task is to build a machine learning model that can classify SMS messages as either Spam or Ham (Not Spam).

Dataset

The dataset contains SMS messages with corresponding labels indicating whether a message is spam or not. Pandas was used to load and explore the dataset.

Steps Performed

- Loaded the dataset using pandas
- Cleaned and prepared the data
- Checked for missing values
- Split the dataset into training and testing sets
- Converted text into numerical features
- Trained a machine learning classifier
- Evaluated model performance

Tools & Libraries Used

- Python
- Pandas
- Scikit-learn
- Jupyter Notebook

Conclusion

The SMS Spam Detection model successfully distinguishes between spam and non-spam messages, demonstrating the application of machine learning techniques to text classification problems.
